- Streaming platform built with React & Tailwind, featuring login, film watching/downloading,related film suggestions, user reviews, and data management.
- Live Demo: https://ahmedelminshawy89.github.io/MoviesApp/
- Code: https://github.com/AhmedElminshawy89/MoviesApp

Graduation Project: (Intelligent Tourism Platform)

- Project Concept

  The project is a specialized tourism platform focused on Egypt, aiming provide an exceptional tourism experience for users through the use of AI technologies. The project includes the following features:

- Comprehensive Database:

  The platform offers detailed information about all cities, tourist attractions, entertainment spots, and restaurants within Egypt.

- Trip Planning:

  A feature that allows users to create trip plans for up to 7 days, helping

them organize their time effectively.

- Personalized Recommendations:

  Sections like "Recommendation" and "Made for You" suggest places and activities based on user preferences and behavior on the platform.

- Admin Dashboard:

  A complete control panel for managing all aspects of the platform, ensuring comprehensive oversight and management capabilities.

- Technologies Used

  ReactJS: For building an interactive user interface.

  TypeScript : To ensure safe and scalable code.

  React Redux Toolkit Query : For efficient state management and data fetching.
  TailwindCSS : For designing a modern and responsive user interface.

- Comparison to Other Platforms

The platform is similar to TripAdvisor but is specifically tailored for Egypt, allowing for more accurate and personalized content and recommendations that cater to tourists within Egypt.
